Win!

WINFORD
WORLD SCHOOL

We are building a future where every child is a winner

The idea of Winford was conceived by a group of established academicians who after years of expertise realised that schools need to be re-designed to value the talent within every child.

The name of the school emerges by joining 'Win' and 'ford', which also means a bridge. Winford thus becomes a child's bridge to victory. There is a promise in the name- that a good education can take you anywhere. And with Winford, that journey will definitely lead to only success.

What helps us stand out in Batala is our global outlook towards education. We don't just follow the standard curriculum but also enhance our student programmes with internationally tested approaches like activity-based and integrated learning. Together we want to build a school that equips young minds to holistically transition to the global citizens of the 21st century.

Mission

- Education with a global approach for-
1. Developing children to be ready for the future on all fronts
 2. Building curiosity towards the world through inquiry
 3. Enabling all children with equal opportunities to assure success

Vision

- A place where each child-
1. Is empowered holistically
 2. Reaches their highest potential
 3. Leads change in the world

It begins with a dream, whatever it might be.

What students dream to be in their childhood comes from the purest corners of their heart and genuine interest of their minds. It is the role of education to recognize these unique aspirations and foster them so that children learn to use their talents in real life. This is what makes learning fun. This is what encourages children to do better. Most importantly, it becomes the basis of a not only successful but happy life when a child finds a school that believes in their dream.

"My teachers say that I have a bright future and am never afraid to speak my mind, so I shall become a lawyer. I will stand up for the rights of the poor and orphans."

"I saw a program on TV about space and since then I dream of only one thing: I want to go to the moon! It must be so beautiful to look down at the Earth from space. I wonder whether I will be able to see India- it's quite big, isn't it?"

"I don't like when my friends and family fall sick or are in pain. I want to make a medicine that cures any disease in one day. I am determined to become the first doctor in my family!"

We let the child explore the field

It's essential that a child sees and feels what lies in the outside world for them to truly know what suits them. Hence, we create that world of opportunities within their campus life so that they can choose their goals confidently. Students get the exposure across academics and co-curricular.

Academics

Co-curricular

Activity-based Lessons

Activity-based learning is the process of learning by doing. As opposed to asking kids to simply listen and take notes, activity-based learning encourages students to actively participate in their own learning experience through practical activities such as problem-solving and independent investigation.

Integrated Learning

The integrated curriculum is about making significant connections between subjects or skills that are usually addressing several different subject areas. It focuses on making connections among concepts and experiences so that information and skills can be applied to novel and complex issues or challenges.

Differentiated Instruction

By considering varied learning needs, teachers can develop personalized instruction so that all children in the classroom can learn effectively. To do this, a teacher sets different expectations for task completion for students, specifically based upon their individual needs.

21st Century Skills Programme

21st Century Skills are the skills that are required by an individual for his/ her holistic development so that he/she can contribute to the progress and development of his society/ nation and world.

Dance

Music

Arts & Craft

Badminton

Basketball

Swimming

Tennis

Chess

Each ambition is supported with infrastructure

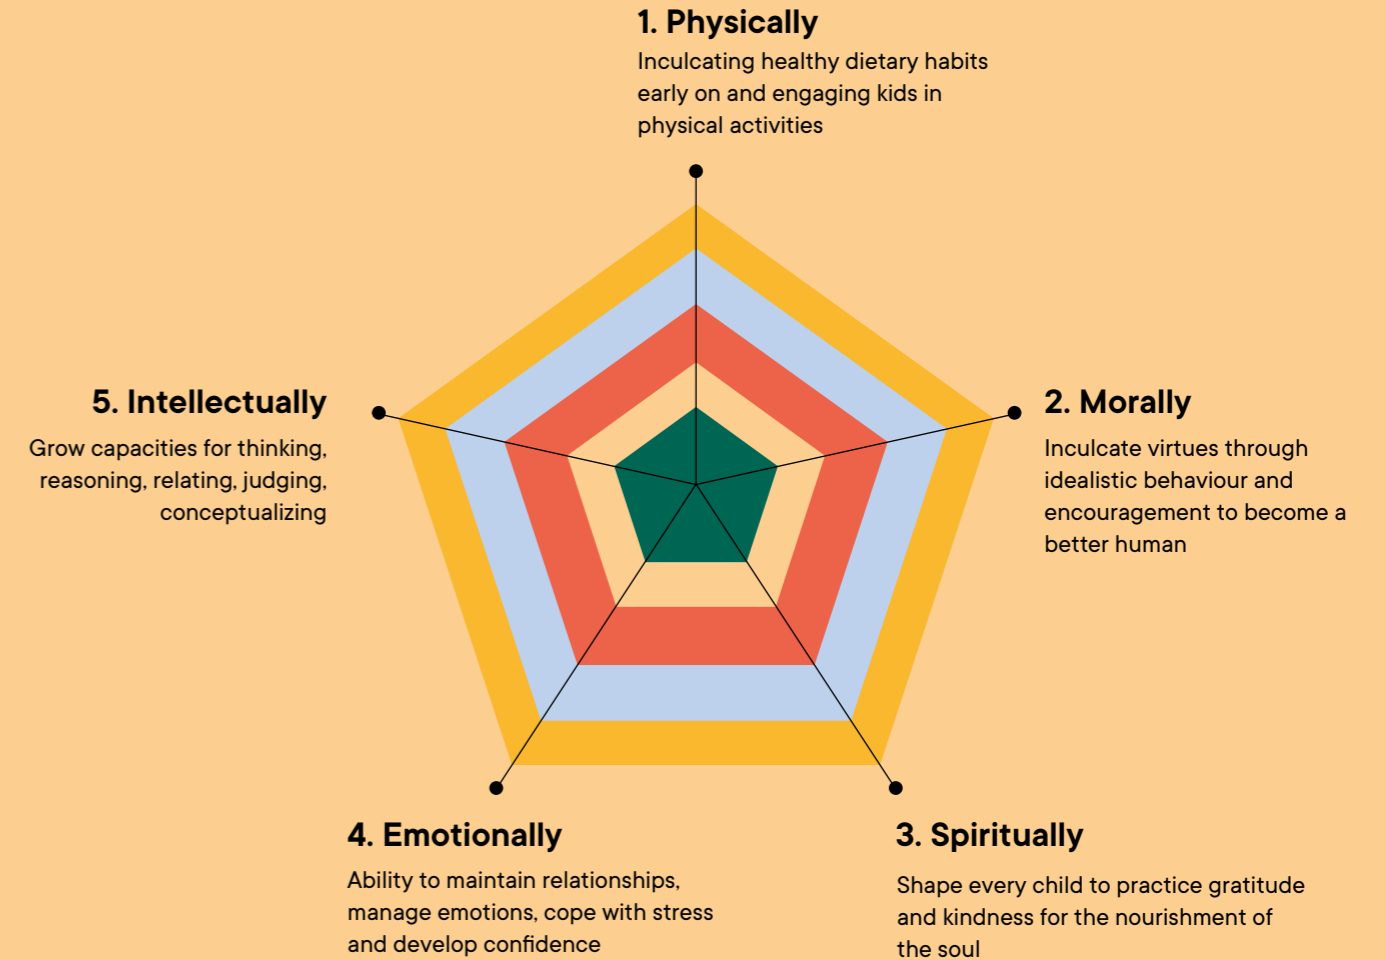

The right ambience is needed in imparting quality education. It makes it interesting and gets the children motivated to come to school, this, in turn, improve the attendance and interest of students in learning. A school building should be made on planning and love, and not just bricks and stone. A great deal of thought has gone into transforming brick walls and concrete slabs into the architectural beauty that is the Winford campus.

Teachers lead the way for holistic development

Teachers at Winford not only cover the syllabus but the lessons for life. Right from pre-schooling to higher standards, they play an essential role in shaping the future of students. They set a tone of the school, mentor and teach children and nurture them well. In the comfort of an encouraging teacher, a child opens up, loses the fear to fail and tries harder to excel. Our teachers possess a passion for the subjects that they teach and genuine care for the students with whom they connect. They inspired kids to play with ideas, think deeply about the subject matter, take on more challenging work, and even pursue careers in a particular field of study.

Our 5 fold teaching approach

The world is full of dreams. Pick the one that's let's your kid shine the brightest.

We understand that parents today have to grapple with a hundred considerations when it comes to planning for their child's future. We, as a school, don't only expose the child to an array of opportunities but also assess practically where they can optimize their talents and interests.

Education is beyond books, pencils and chalkboards for us. It is a way of guiding our children to successful lives.

We can make it happen.

Talk to us.

I could be...
